REPUBLIC

The best floors made by anyone, anywhere

REPUBLIC FLOORS is all about innovation that gives you the freedom of choice.

Until now, people who wished to floor their homes had the choice between the products of big manufacturers - who typically offer decent products at high prices and limited range – and imports that offer a large variety of styles at low cost, but suffer from dubious quality and reliability.

Many such imports don't even conform to lenient US health codes - let alone California's strict CARB requirements.

With **REPUBLIC** all that has changed.

REPUBLIC was created to offer the best of both worlds – great, **GUARANTEED** quality, offered in range of dazzling styles – and all at lower prices.

We can do all that because we don't **IMPORT** our products from unknown makers in the Far East– we **MANUFACTURE** it in the Far East ourselves or we import it from the finest floor makers in Europe.

REPUBLIC: you never have to settle for less.

100% Waterproof flooring

The Benefits of SPC Flooring

- There is little doubt that Stone Plastic Composite (SPC) flooring is emerging as one of the most popular flooring categories today. But what is SPC and what is the reason behind that popularity? Here are a few answers to some key questions.

- What is SPC?

SPC is a composite material that does not contain any wood. It is waterproof, rigid and stable. SPC products are commonly referred to as enhanced vinyl plank, luxury vinyl flooring or waterproof vinyl.

- Is SPC better than laminate?

The biggest advantage of SPC is that it's waterproof and appropriate for areas where laminate shouldn't be used – bathrooms, for example. In addition, the wear layer of SPC offers more cushion and absorbs sound to make a quieter floor.

- How is SPC different from LVT?

This biggest difference between SPC and LVT is that SPC is waterproof.

It can also be laid over most subfloors with little preparation. Unlike traditional vinyl floor that will highlight any unevenness present in the subfloor, the rigid core of SPC flooring allows for longer and wider format options so you don't have to worry when installing over cracks or divots in subfloors.

SCS Global Services does hereby certify that an independent assessment has been conducted on behalf of:

Republic Floor

2250 Yates Ave., Commerce, CA, United States

For the following product(s):

Vinyl Tile:

PURE SPC 3.2mm-8.0mm

The product(s) meet(s) all of the necessary qualifications to be certified for the following claim(s):

FloorScore®

Indoor Air Quality Certified to SCS-EC10.3-2014 v4.0

Conforms to the CDPH/EHLB Standard Method v1.2-2017 (California Section 01350), effective April 1, 2017, for the school classroom and private office parameters when modeled as Flooring.

Measured Concentration of Total Volatile Organic Compounds (TVOC): Less than/equal to 0.5 mg/m³ (in compliance with CDPH/EHLB Standard Method v1.2-2017)

Registration # SCS-FS-04893

Valid from: February 23, 2018 to October 31, 2018

SCS Global Services is currently the only certification body approved by the Resilient Floor Covering Institute (RFCI) to provide FloorScore® product certification; certified products are only listed on the SCS Green Products Guide, <http://www.scsglobalservices.com/certified-green-products-guide>.

BEACH HOUSE COLLECTION

Nothing beats the warm and comforting feeling of a day at the beach. The Republic Beach House collection, in easy going colors, invokes that feeling with its real wood grain look and its ability to stand up to water. Go ahead and allow wet feet to come in and dry off - we've got you covered!

The new Republic Pure SPC features Republic's proprietary Stone Plastic Composite technology which is completely inert and waterproof. Unlike WPC (wood plastic composite) floors, Republic's stone composite contains no wood of any kind. At 7mm thickness, it is stronger and snaps into place far easier than the usual 5.5mm composites. It lasts longer and - true to the Republic way - is completely green.

Installation instructions

Product Inspections

Inspection of all flooring material must be done before installation.

Materials with visible defects are not covered under warranties once they are installed. Our Pure SPC floors are manufactured in accordance with accepted industry standards, which permit defect tolerance not to exceed 2%.

Sub-Floor Preparation

- Sub-floor must be flat, dry, smooth, level, free from residues and structurally sound.
- A level slope is a foundation that is less from 5mm over 2 meters or ¼” over 6 feet.
- Documents must be kept of all test results for warranty purposes.

Preparing the Room

- Check that the doors can still open and close after Pure SPC flooring is installed.

Radiant Floor Heating

- Pure SPC floors can be installed over of a multitude of in-floor heating systems, provided that instructions from the supplier of the in-floor heating system are followed.
- The temperature of the sub-floor or the heat radiating from electric heating mats should not exceed 84 degrees Fahrenheit (29 degrees Celsius).

Pure SPC™

100%
WATERPROOF

Installation Guidelines

- Pure SPC flooring must be installed indoors.
- Pure SPC flooring should not be exposed to temperatures above 140° F (60° C) or below 32° F (0° C).

Expansion space should be left around the perimeter. Typically expansion is equal to the thickness of the product installed.

You can install on grade, below grade or above.

Republic Floor requires 3/8" expansion for every 20 feet in length or width. A T-molding is required for greater than 40 feet in length or width.

A 1/4" expansion space must also be for undercut jambs and casing.

Start in a corner and lay first row with tongue sides toward walls. Proper expansion space can be achieved by pulling floor away from wall once first three rows have been installed.

Hold the next board against the first board at approximately 45 degree angle and lay flat on floor. Continue in this manner for the entire first row.

Cut end board in first row to correct length and start second row with left over piece (if possible). End joints must be staggered by at least 8" for a natural random appearance.

Butt seam must be placed in each row regardless of width.

Hold boards approximately 45 degree angles to board in front. Press forward to engage joint and lay flat on floor.

When three rows have been laid, pull floor away from starting wall until there is proper amount of expansion space. Place shims between floor and wall to maintain this space.

You can proceed until the entire floor is finished.

Trim the underlayment before installing quarter rounds or wall base.

Pure SPC™

100%
WATERPROOF

Warranty

Pure SPC flooring carries a limited 25 year residential warranty and a limited 10 year commercial warranty for wear to the finish under proper usage and maintenance conditions. Pure SPC flooring is guaranteed to be 100% waterproof but spills should be cleaned in a timely manner to prevent the possibility of mold or mildew growth.

The guarantee applies only to the original purchaser and proof of purchase is required for all claims. The guarantee is for replacement or refund of the Pure SPC material only, not for any labor. Claims for wear must show a minimum dime size area. This guarantee is pro-rated based on the amount of time the Pure SPC floor has been installed.

A percentage would be replaced depending on the length of time since the Pure SPC floor was installed. Defect of goods must be proven by inspection procedures deemed proper by the Manufacturer. Warranty is conditioned upon Manufacturer's receipt of notice in writing from the buyer of the alleged defect prior to expiration of the warranty period and evidence that the products were properly installed and not subject to any of the exclusions described below.

Exclusions

- Any visible defects noted after installation.
- Consequential or incidental damages, such as any loss, expense or damages other than to the flooring itself that may result from a defect in the flooring.
- Improper installation including, but not limited to, installation by non-licensed individual(s).
- Improper maintenance or inadequate care, including, but not limited to, mold or mildew growth as a result of excessive moisture accumulation.
- Accidents, abuse, or misuse.
- Building settling or uneven sub-floor.
- Damages caused by furniture without felt pads or protective covers.
- Damages caused by sharp objects making contact with the floor.
- Damage caused by excessive sunlight.
- Damages caused by urine or other bodily fluids.

Pure SPC™

100%
WATERPROOF

Maintenance Information

- Place natural fiber rugs at entry points to help trap grit and absorb moisture that may damage the finish. This can protect the floors from dirt or wear.
- To prevent abrasive dirt and dust from accumulating and scratching the finish, vacuum, sweep or dust mop your floor once a week or more if needed. The vacuum head should be a brush or felt attachment. Do not use a vacuum with a beater bar head.
- We recommend Basic Coatings Squeaky Clean or Bona Hardwood Cleaner for regular cleaning and removing grease and smudges from your floor.
- Do not use harsh abrasive cleaners, bleach, ammonia or vinegar based cleaners, wax or acrylic polishes, or oil soaps. These may dull or damage the finish, leaving a greasy film and making the floor slippery and more difficult to clean.
- Protect your floor against direct sunlight or any intense source of artificial lighting. Over time, intense natural and artificial light may discolor the floors.
- Do not roll, or drag heavy objects across your floor. Do not wear shoes having heel taps, spikes, cleats, rocks, gravel or sharp objects protruding from the sole.
- Add felt pads to all furniture and chair legs to prevent damage to the floor. Replace the felt pads when dirty or worn. For extremely heavy objects, use wide, non staining rubber cups. Protective floor coverings for wheeled office furniture should be used.

Pure SPC™
